

Pressure relief valves type AGAM

two stage, subplate mounting - ISO 6264 size 10, 20 and 32

AGAM are double stage pressure relief valves with balanced poppet, designed to operate in oil hydraulic systems.

In standard versions the piloting pressure of the poppet (1) of the main stage (2) is regulated by means of a grub screw (5) in the cover (4). Optional versions with setting adjustment by handwheel (5) instead of the grub screw are available on request. Clockwise rotation increases the pressure.

Also available in safety option with sealed regulation:

- /PED conforming to PED Directive (97/23/CE)

Set pressure at:

AGAM-10 = 25 l/min

AGAM-20 = 25 l/min

AGAM-32 = 25 l/min

For this version the P, Q limits are shown in section 8.

AGAM can be equipped with a solenoid valve (for venting or for different pressure setting).

Mounting surface: ISO 6264 size 10, 20 and 32.

Max flow: 200, 400 and 600 l/min respectively.

Pressure up to 350 bar.

(1) For other supply voltages available on request see technical table E010.

(2) Coil can be supplied also with 60 Hz of voltage frequency: in this case the performances are reduced by 10 ÷ 15% and the power consumption is 55 VA.

(3) Average values based on tests performed at nominal hydraulic condition and ambient/coil temperature of 20°C.

(4) When solenoid is energized, the inrush current is approx 3 times the holding current. Inrush current values correspond to a power consumption of about 150 VA.
